CONVENTIONAL WATER SYSTEMS  
FOR EVAPORATIVE COOLING

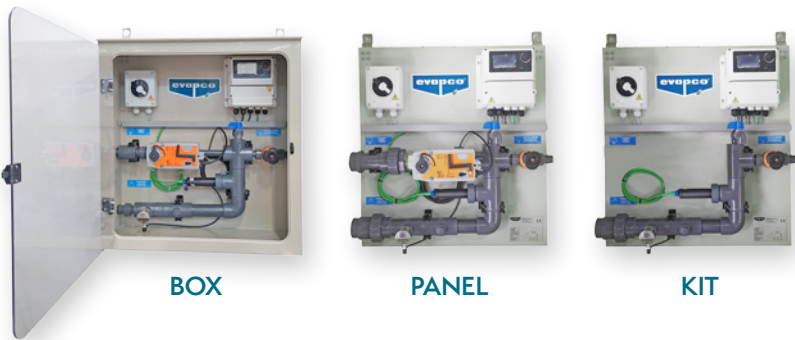

**EBDS**  
EVAPCO BLOWDOWN SYSTEM

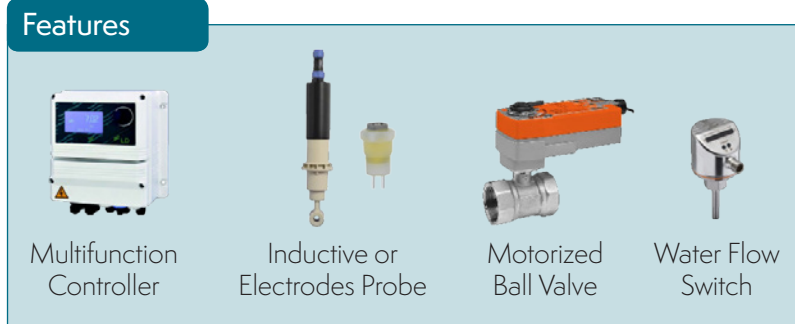

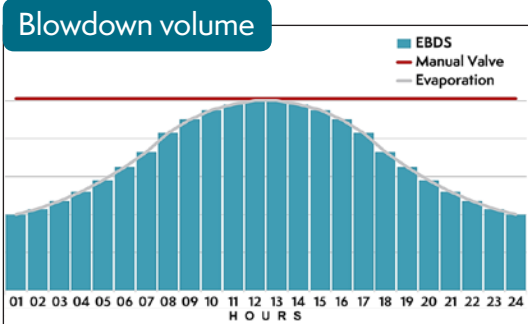

**EBDS** is an automatic blowdown system. Pre-assembled, factory tested and CE marked, in compliance with the Machinery Directive.

**EBDS** automatically drains water from the cooling unit when conductivity reaches the upper set-point, and only for the time required to bring it down to the minimum threshold.

By maintaining optimal water salinity, it reduces water consumption and effectively mitigates the risk of scaling and corrosion.

The **EBDS** is available in 3 executions, to suit every site condition. They can be easily installed and quickly started-up on cooling units of any brands.

**ECDS**  
EVAPCO CHEMICAL DOSING SYSTEM

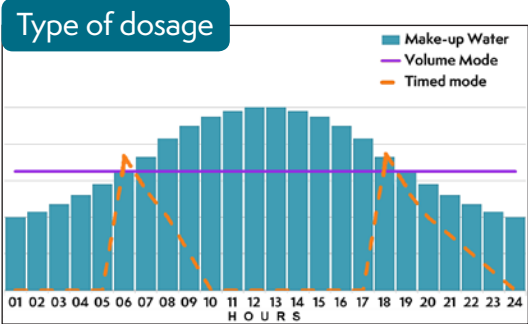

**ECDS** is an automatic chemical dosing system, pre-assembled, factory tested and CE marked, in compliance with the Machinery Directive.

**ECDS** injects liquid chemicals into the cooling water circuit, either based on volume or in timed mode.

Consistent and accurate dosing is essential to prevent scaling, corrosion and microbiological growth within the evaporative cooling system, ensuring optimal performance and reliability.

The **ECDS** is available in 3 executions, to suit every site condition. They can be easily installed and started-up on cooling units of any brands and with any chemicals.
